Summary

The National Citizen Survey™ (The NCS™) is a collaborative effort between National Research Center, Inc. (NRC) and the International City/County Management Association (ICMA). The survey and its administration are standardized to assure high quality research methods and directly comparable results across The NCS communities. This report discusses differences in opinion of survey respondents by length of residency in Edmonds, annual household income, housing tenure (rent or own), age and sex.

Responses in the following tables show only the proportion of respondents giving a certain answer; for example, the percent of respondents who rated the quality of life as “excellent” or “good,” or the percent of respondents who attended a public meeting more than once a month. ANOVA and chi-square tests of significance were applied to these comparisons of survey questions. A “p-value” of 0.05 or less indicates that there is less than a 5% probability that differences observed between subgroups are due to chance; or in other words, a greater than 95% probability that the differences observed are “real.” Where differences were statistically significant, they have been shaded grey.

The margin of error for this report is generally no greater than plus or minus three percentage points around any given percent reported for the entire sample (906 completed surveys). For subgroups of responses, the margin of error increases because the sample size for the subgroup is smaller. For subgroups of approximately 100 respondents, the margin of error is plus or minus 10 percentage points.

Notable differences between demographic subgroups included the following:

- Within the pillar of Community Characteristics, residents with an annual household income of more than \$100,000 tended to give lower ratings to ease of travel by public transportation in Edmonds and opportunities to participate in religious or spiritual events and activities compared to residents with a lower annual household income. Residents who rented their homes were more likely than those who owned to positively rate various aspects of Mobility, including ease of public parking, travel by public transportation and by bicycle in Edmonds but tended to give lower ratings to the overall ease of travel in the community. Residents aged 18 to 34 were more likely to positively rate opportunities to volunteer and participate in community matters when compared to their older counterparts while residents aged 55 or older were more likely to give positive ratings to the openness and acceptance of the community toward people of diverse backgrounds.
- When differences emerged among the general aspects of Governance, residents who had lived in Edmonds for more than 20 years tended to give lower ratings to each item listed including the value of services for taxes paid and the overall direction that Edmonds is taking among others. When differences emerged by age, residents 18 to 34 tended to give higher ratings to general aspects of Governance.
- Homeowners reported higher levels of Participation for many activities compared to those who rented their home, including contacting the City of Edmonds, making efforts to make their homes more energy efficient, being in excellent or very good health, participating in clubs and indicated that they were NOT under housing cost stress. Residents over the age of 55 were less likely to report that they felt the economy would have a positive impact on their income or that they worked in Edmonds. Edmonds residents whose income was less than \$49,000 a year were much more likely to indicate that they were under housing cost stress, and much less likely to have attended a City-sponsored event.
- Residents who had lived in Edmonds for 20 or more years, homeowners, people aged 55 or older, and men were less likely to support increased local public funding for the expansion of bicycle facilities compared to their counterparts. The same demographic, with the exception of older residents, were also less likely to support increased public funding for acquisition of parkland, beachfront.
- Residents whose annual household income was under \$49,000 tended to report greater rates of discrimination based on disability. Younger residents (aged 18 to 34) were more likely to report discrimination based on age.

The National Citizen Survey™

Table 1: Community Characteristics - General

Percent rating positively (e.g., excellent/good)	Length of residency in Edmonds			Annual household income			Rent or own		Age			Sex		Overall
	5 years or less	6 to 20 years	More than 20 years	Less than \$49,999	\$50,000 to \$99,999	\$100,000 or more	Rent	Own	18-34	35-54	55+	Female	Male
