DAYTON STREET CONSTRUCTION UPDATE: UPCOMING ROAD RESTORATION AND INTERSECTION CLOSURES ON DAYTON STREET

(Edmonds) The City is working to complete the pavement and crosswalk replacements at 5th Avenue and Dayton Street prior to the Phase 2 re-opening of businesses in our downtown core coming soon. The reconstruction of decorative concrete crosswalks at this location will require a 72-hour closure as well as intermittent closures until the end of May.

The last week of May crews plan to wrap up paving at the 5th Avenue and Dayton Street intersection. This will include reconstruction of all four concrete crosswalks. The closure is necessary to allow the concrete in these newly reconstructed crosswalks time to cure and strengthen prior to allowing traffic on them. During this work you can expect:

- The Dayton Street and 5th Avenue intersection will close around the clock starting the morning of May 26 through the morning of May 29.
- Crews will have intermittent closures of the intersection through the remainder of May.
- Vehicle traffic through the 5th Avenue intersection will not be allowed at these times.
- Sidewalk access is allowed, but the crosswalks at the 5th/ Dayton intersection will be closed; pedestrian detours will be in place.
- Vehicle access to businesses, driveways, and parking lots leading to the intersection will be maintained.

Looking ahead

No further full closures of the intersection of 5th Avenue and Dayton Street are anticipated after the end of May. Once the crosswalks are completed, crews will continue with their work east of the intersection. Workday road and intersection closures are expected in the near future for Dayton between 6th Avenue and 9th Avenue and intersections as the project gets closer to completion. We will provide updates on when to expect these intersection closures in future updates. Once all the road paving is complete, crews will return in late June and into July to stripe the road and complete punch list items.
